

A specialized non-public
therapeutic education
provider

NeuroRestorative Academy provides a supportive academic environment in which students feel included, proud and comfortable with who they are, preparing them for who they will become.

About NeuroRestorative Academy: Residential and Day Programs

Since 1980, NeuroRestorative Academy has served children and adolescents who experience behavior dyscontrol that compromises learning in transitional environments. Regardless of diagnosis, the students we serve may demonstrate persistent high frequency/high magnitude behaviors requiring trauma-informed, person-centered environments of care supporting each individual to reach their highest potential. Whether a child or adolescent presents with emotional disturbance, multiple disabilities, speech and language impairments, or other health impairments, including TBI or neurologic impairment, our residential and day programs can help.

NeuroRestorative Academies provide dynamic learning opportunities in a supported, fun, and innovative environment in state-of-the-art school buildings. We have a low teacher-to-student ratio, ensuring personalized attention on each student. The schools are approved/ registered or certified by states as a non-public residential facility.

Goals

Our goals include least restrictive community-based care, reintegration into a home school district, supporting home school district success, and supporting family reintegration.

Functional Outcomes

- Improve academic skills
- Improve behavior regulation skills
- Improve executive functioning
